

Who Owns the Moon?: Extraterrestrial Aspects of Land and Mineral Resources Ownership (Space Regulations Library)

This work investigates the permissibility and viability of property rights on the -
lestial bodies, particularly the
extraterrestrial aspects of land and mineral
resources ownership. In lay terms, it aims
to find an answer to the question Who owns
the Moon? The first chapter critically
analyses and dismantles with legal
arguments the issue of sale of
extraterrestrial real estate, after having
perused some of the trivial claims of
celestial bodies ownership. The only
consequence these claims have on the
plane of space law is to highlight the need
for a better regulation of extraterrestrial
landed property rights. Next, the book
addresses the apparent
silence of the law in the field of extrater-
restrial
landed property, scrutinizing whether the
factual situation on the extraterrestrial
realms calls for legal regulations. The
sources of law are examined in their dual
dimension that is, the facts that have
caused and shaped the law of
extraterrestrial real estate, and the norms
which express this law. It is found that the
norms and rules regarding property rights
in the celestial realms are rather limited,
failing to define basic concepts such as
celestial body.
